- Consultancy	Consultant at UNICEF for maternal and child health and health information systems since 2010 - present
How are personal research activities reflected in teaching activities?	I was assigned as a teacher in a research methods course at this faculty. Most of my research focuses on maternal and child health and demographics. These studies apply research methods both quantitative and qualitative. This research provides hands-on experience in applying research method theories. This will provide a good understanding of a theory of research methods. Thus I can better explain the material of research methods to students. In addition, even though my research focuses on the field of public health, my research studies intersect with the implementation of public policies. So the case examples that I gave in lectures can actually be implemented in the field of public policy.
